

Installation Procedure of Intraday demo

Please go through installation procedure step by step. Total procedure will take 10- 20 minutes depending on the configuration of PC/ Laptop

STEP 1: Uninstall Existing Metastock, Please save if you have any special indicator or expert before removing Metastock.

To uninstall Metastock:: Start>settings>control panel> add / remove programs>select Metastock >remove>yes>yes to all>uninstall successfully completed>ok

Close control panel.

Step 2: Check your computer date and time. It must be current.

Step 3: Check your computer date format.

Start>settings>control panel>regional language setting>customize>date>short date format should be **dd/mm/yyyy** >long date format should be **dd MMMM yyyy**> set short date and long date format accordingly > apply>ok

Close control panel.

Step 4: Download Nx RT set up from the email send to you. Save the setup file at your desktop. Or Run the setup from your CD.

Run set up: Double click on set up> preparing to install>next>next> by default typical>next>install>finish.

Now go to start>programs>nexus>nexus2.1 (send this icon to desktop)

Step 5:

Installation of Metastock 8 pro.

Insert your cd.

Run Metastock set up>next>Select I accept this agreement> next>Put your name, company, set up key>next>yes>next>by default standard>next>Select **Signal (broadcast version)**>next>Choose Conversion option>uncheck both box (if not already unchecked)>next>set up will update old expert advisor etc >ok>overwrite>file server start option>by default 'when you start any equis realtime application' >next>select shortcut Metastock Professional only>next>restart>finish.

Rename this Metastock as INTRA. Intraday chart will run in this INTRA MetaStock only during online mode at Market hours. For using EOD data (if you already have) you have to follow the next few steps..

Creating another shortcut for Metastock offline mode. (This will help you for EOD and Offline INTRA Chart study etc.)

Start>programs>equis international>select metastock professional offline mode and right click on it >send to desktop.

In case Metastock 9 install in realtime mode.

Your Installation is complete now we shall go for setting

Step 6: Open Nx RT from desktop>try>green box Real Time (MS) opened>Three Menu are there View, Visual, Graph.

Go to Graph>Creat>Creat MS Folder>Browse The Folder>My Computer> C drive>Create new folder name it Nx RT>ok>yes>ok.

Again go to graph>Creat>MS files for Eqs

Again go to graph>Creat>MS files for Futures>current month

Step 7:Add Scrip:(at demo period only nifty eq & fut are active)

NIFTY EQ click on ' +'

NIFTY OCT click on '+'

Now click on save (extreme right of +)

Again go to Graph>create>select MS Files from watch list.

Go to view>exit.

Step 8: Start>programs>Equis international>select equis realtime configuration>

Data option>uncheck all boxes.

File Update>add>browse>C drive>select Nx RT folder>ok>ok>apply>ok.

Step 9: Open Nx RT from your desktop>try>view>Connection Info>put user name and password (Collect from me) >save>Click on logon

If log on then fine if any other messages come ring me or sms me with CPU ID.

To get CPU ID: press Shift at your keyboard and go to view>open connection info you will get CPU ID. You will be log on within 5mints.

Step 10: After log on

Select Nifty OCT>right click on that>select Back Fill multiday+today

Let the backfill processed>click on Fill option if it appears. The small green box will disappear after back fill is over.

Follow same method for NIFTY EQ.

(Step 11: This step is not mandatory. Follow this step only if your computer is P-4 otherwise ignore this step. Open metastock intra>tools>select option >select realtime>uncheck recalculate expert live.

In update commentary on, select Refresh button from drop down menu>ok)

With these 10 steps your installation is 100 % complete

Now go to File in Metastock tool bar>open>C drive>NxRT folder>open >select NIFTY OCT>OPEN and **View the Intra day chart streaming in your PC/Laptop.**
